

PRACTICAL NO. 6

1. Aim

To conduct a market survey for setting up a new startup by preparing a suitable questionnaire, collecting information from potential customers and analysing the collected data.

2. Objectives

To understand the importance of market survey for a new startup.

1. To identify the needs and preferences of potential customers.
2. To prepare a questionnaire for collecting market information.
3. To collect and analyse the responses of customers.
4. To use the survey results for making decisions regarding the proposed startup.

3. Introduction

A market survey is a systematic process of collecting information from potential customers about their needs, preferences, buying behaviour and opinions.

Before starting a new business, an entrepreneur needs to understand whether customers are interested in the proposed product or service. A market survey provides useful information about customer requirements, preferred price, product features and purchasing methods, which helps in making better startup decisions.

The syllabus specifically includes questionnaire design, sampling, market survey and data analysis under the Startup Selection Process.

4. Proposed Startup

For this sample survey, the following startup is selected:

Particular	Details
Name of Startup	HydroGlow
Product	Smart Reusable Water Bottle
Type of Enterprise	Manufacturing
Target Customers	Students, teachers and fitness users
Survey Area	Local college/community
Sample Size	20 respondents

5. Market Survey Questionnaire

The following questionnaire is prepared to collect information from potential customers.

Q. No.	Question	Options
1	Do you currently use a reusable water bottle?	Yes / No
2	Would you be interested in buying a smart reusable water bottle?	Yes / No / Maybe
3	Which feature is most important to you?	Price / Design / Durability / Temperature Display
4	What price range would you prefer?	Below ₹400 / ₹400–₹600 / Above ₹600
5	Where would you prefer to purchase the product?	Online / Local Shop / Both
6	Which bottle capacity would you prefer?	500 ml / 750 ml / 1 litre
7	How often do you purchase or replace water bottles?	Frequently / Sometimes / Rarely
8	Would you recommend a smart reusable bottle to others?	Yes / No / Maybe
9	What improvement would you suggest in the product?	Open-ended
10	Would you like to see more smart and eco-friendly products?	Yes / No / Maybe

6. Sampling Method

For this survey, convenience sampling is used.

A sample of 20 potential customers is selected from students, teachers and fitness users who are easily available for collecting responses.

7. Sample Survey Data

The responses collected from 20 respondents are summarized below:

Survey Question	Major Response	No. of Respondents
Interested in smart reusable bottle	Yes	17
Preferred price range	₹400–₹600	12
Most important feature	Durability	9
Preferred purchase method	Online	13
Preferred bottle capacity	750 ml	11
Would recommend product	Yes	16
Interested in more smart eco-friendly products	Yes	18

8. Data Analysis

The collected data is analysed to understand customer preferences.

Interest in Product

Out of 20 respondents, 17 respondents showed interest in buying the proposed smart reusable water bottle.

Price Preference

The ₹400–₹600 price range received the highest preference from the respondents.

Important Feature

Durability was selected as the most important feature by the highest number of respondents.

Purchase Method

More respondents preferred online purchasing compared with only local-shop purchasing.

Smart and Eco-Friendly Products

A majority of respondents showed interest in purchasing more smart and eco-friendly products.

9. Findings

Based on the market survey, the following findings were obtained:

1. Most respondents showed interest in the proposed product.
2. Customers consider price and durability while selecting the product.
3. The ₹400–₹600 range was preferred by the largest number of respondents.
4. Online purchasing can be considered as an important sales channel.
5. 750 ml capacity was preferred by most respondents.
6. There is interest among respondents in other smart and eco-friendly products.

10. Suggestions

Based on the survey results, the startup should:

- Maintain good product quality and durability.
- Keep the product price within the preferred range.
- Provide an online purchasing option.
- Offer suitable bottle capacity and attractive design.
- Consider customer suggestions for future product improvement.

11. Conclusion

The market survey helped to understand the needs, preferences and purchasing behaviour of potential customers for the proposed startup.

The survey results indicate that the proposed product has customer interest within the surveyed sample. The information collected through the questionnaire can be used by the entrepreneur for decisions related to product features, pricing, selling method and further product development.
