

## Practical No. 10

**Name : Danish Altaf Solkar**

**Class : CO - B**

**Enrolment no. : 24111590805**

**Batch : 2**

**Aim : Write test cases to validate Requirements from SRS Document**

**Project:** Online Food Ordering System

### **Aim**

To design test cases for the Online Food Ordering System by referring to the Software Requirements Specification (SRS) and to verify that the specified functional requirements work as expected.

### **Test Case Design**

| TC ID | Requirement / Function | Test Condition / Input                        | Test Steps                                                                  | Expected Result                                                           | Priority |
|-------|------------------------|-----------------------------------------------|-----------------------------------------------------------------------------|---------------------------------------------------------------------------|----------|
| TC-01 | User Registration      | Valid name, email, mobile number and password | 1. Open registration page.<br>2. Enter valid details.<br>3. Click Register. | Account is created successfully and confirmation is displayed.            | High     |
| TC-02 | User Registration      | Email already registered                      | 1. Open registration page.<br>2. Enter an existing email.<br>3. Submit.     | System rejects registration and displays an appropriate error message.    | High     |
| TC-03 | User Login             | Valid registered email and password           | 1. Open login page.<br>2. Enter credentials.<br>3. Click Login.             | User is authenticated and redirected to the home/menu page.               | High     |
| TC-04 | User Login             | Invalid password                              | 1. Enter valid email with incorrect password.<br>2. Click Login.            | Login fails and an error message is displayed.                            | High     |
| TC-05 | Browse Food Menu       | Menu contains available food items            | 1. Login.<br>2. Open Food Menu.                                             | Available food items are displayed with name, price and relevant details. | High     |
| TC-06 | Search Food            | Search keyword such as 'Pizza'                | 1. Open menu.<br>2. Enter keyword in search box.<br>3. Search.              | Matching food items are displayed.                                        | Medium   |
| TC-07 | Add Item to Cart       | Select an available food item                 | 1. Select item.<br>2. Click Add to Cart.<br>3. Open cart.                   | Selected item appears in cart with correct quantity and price.            | High     |
| TC-08 | Update Cart Quantity   | Change quantity from 1 to 2                   | 1. Open cart.<br>2. Increase quantity.<br>3. Check total.                   | Quantity and total amount are updated correctly.                          | High     |

| TC ID | Requirement / Function | Test Condition / Input                                      | Test Steps                                                                 | Expected Result                                                                | Priority |
|-------|------------------------|-------------------------------------------------------------|----------------------------------------------------------------------------|--------------------------------------------------------------------------------|----------|
| TC-09 | Remove Cart Item       | Item exists in cart                                         | 1. Open cart.<br>2. Click Remove for an item.                              | Item is removed and cart total is recalculated.                                | Medium   |
| TC-10 | Place Order            | Cart contains valid items and delivery details are provided | 1. Open cart.<br>2. Enter/confirm delivery details.<br>3. Place order.     | Order is created successfully and a unique order ID/confirmation is displayed. | High     |
| TC-11 | Payment                | Valid payment details / successful payment                  | 1. Proceed to payment.<br>2. Complete payment.                             | Payment is successful and order status is updated appropriately.               | High     |
| TC-12 | Order History          | User has previously placed orders                           | 1. Login.<br>2. Open Order History.                                        | Previous orders are displayed with order details and status.                   | Medium   |
| TC-13 | Order Cancellation     | Eligible order is available                                 | 1. Open order details.<br>2. Select Cancel Order.<br>3. Confirm.           | Order is cancelled and the status is updated.                                  | Medium   |
| TC-14 | Logout                 | Logged-in user                                              | 1. Click Logout.                                                           | User session ends and login page/home page is displayed.                       | Medium   |
| TC-15 | Input Validation       | Blank or invalid required fields                            | 1. Leave required fields blank or enter invalid values.<br>2. Submit form. | System prevents submission and displays validation messages.                   | High     |

## Result

The test cases for the Online Food Ordering System were designed successfully by referring to the SRS requirements. These test cases can be executed to verify the functional requirements such as registration, login, food search, cart management, order placement, payment, order history and cancellation.

**Conclusion:** The prepared test cases provide a systematic method for validating whether the Online Food Ordering System satisfies its specified SRS requirements.
