

Practical no. 12

Name :- Danish Altaf Solkar

Enrolment no. :-24111590805

Class :- CO3K – B

Subject :- OOP

Aim :- Identify the following type of inheritance shown. Write a definition of each class. Write suitable member functions to accept and display data for each class.

Program :-

```
#include<iostream.h>

#include<conio.h>

class Employee{

public:

int emp_id;

char emp_name[50];

void eaccept(){

cout<<"\nEnter Employee Id :- ";

cin>>emp_id;

cout<<"\nEnter Employee Name :- ";

cin>>emp_name;

}

void edisplay(){

cout<<"\nEmployee Id :- "<<emp_id;

cout<<"\nEmployee Name :- "<<emp_name;

}

};

class Emp_union{

public:

int member_id;

void uaccept(){

cout<<"\nEnter Member Id :- ";
```

```

cin>>member_id;

}

void udisplay(){

cout<<"\nMember Id :- "<<member_id;

}

};

class Emp_info : public Employee, public Emp_union{

public:

int basic_salary;

void iaccept(){

cout<<"\nEnter your Basic Salary :- ";

cin>>basic_salary;

}

void idisplay(){

cout<<"\nBasic Salary :- "<<basic_salary;

}

};

void main(){

Emp_info x;

clrscr();

x.eaccept();

x.uaccept();

x.iaccept();

x.edisplay();

x.udisplay();

x.idisplay();

getch();

}

```

OUTPUT:-

```

DOSBox 0.74, Cpu speed: max 100% cycles, Frameskip
Enter Employee Id :- 805
Enter Employee Name :- Danish
Enter Member Id :- 810
Enter your Basic Salary :- 10000

Employee Id :- 805
Employee Name :- Danish
Member Id :- 810
Basic Salary :- 10000

```

Aim :- WAP in C++ to calculate the area and perimeter of rectangles using concept of Inheritance.

Program :-

```
#include<iostream.h>

#include<conio.h>

class Area{

public:

void area();

};

class Perimeter{

public:

void perimeter();

};

class Rectangle : public Area, public Perimeter{

public:

int length,breadth;

void get_data(){

cout<<"\nEnter length of rectangle :- ";

cin>>length;

cout<<"\nEnter breadth of rectangle :- ";

cin>>breadth;

}

void display(){

cout<<"\nLength of rectangle :- "<<length;

cout<<"\nBreadth of rectangle :- "<<breadth;

}

void area(){

int area;

area=length*breadth;
```

```
cout<<"\nArea of rectangle :- "<<area;
}

void perimeter(){
int perimeter;

perimeter=2*length+2*breadth;

cout<<"\nPerimeter of rectangle :- "<<perimeter;
}

};

void main(){
Rectangle r;

clrscr();

r.get_data();

r.display();

r.area();

r.perimeter();

getch();
}
```

OUTPUT:-

DOSBox 0.74, Cpu speed: max 100% cycles, Frameskip

```
Enter length of rectangle :- 10
Enter breadth of rectangle :- 20
Length of rectangle :- 10
Breadth of rectangle :- 20
Area of rectangle :- 200
Perimeter of rectangle :- 60_
```
