

EES UNIT 5 Question Bank

1. Which one below is NOT an example of a fresh water body of water ?

- a) Lakes
- b) Rivers
- c) Ponds
- d) Oceans**

2. Shifting back to a more localized production of food and other resources would lead to all of the following, except _____.

- a) Reduced local environmental sustainability**
- b) More stable source of jobs and income
- c) More profits circulating within each community
- d) Reduced transportation fuel use
- e) Reduced greenhouse gas emissions

3. Which of the following would not traditionally support an environmental-friendly economy ?

- a) Shift taxes from wages and profits to pollution and waste
- b) Improve energy efficiency
- c) Shift from a carbon based economy to a renewable fuel-based economy
- d) Repair ecological damage
- e) Decrease subsidies for alternative fuel vehicles**

4. Changing to a recycling and reuse economy will enable us to meet the needs of an ever-growing population indefinitely.

- a) True
- b) False**

5. Which of the following is a means of personally contributing toward the development of a sustainable society ?

- a) Individual lifestyle change
- b) Career choices
- c) Support of appropriate organizations
- d) Political involvement
- e) All of the above**

6. Large cities in developed countries are impossible without automobile ownership by a high percentage of the cities residents.

- a) True
- b) False**

7. City dwellers must rely on rural areas for the production of all of their foodstuffs.

a) True

b) False

8. A single person cannot help in efforts to work towards a sustainable society.

a) True

b) False

9. Urban sprawl has no advantages.

a) True

b) False

10. The economic, social and cultural backgrounds of people living in inner city areas and new suburban developments are very similar.

a) True

b) False

11. Which of the following is directly or indirectly related to essentially all of our environmental problems ?

a) Depletion of resources

b) Population growth

c) Technology

d) Pollution

e) Destruction of rainforests

12. A graph of human population growth to the present resembles _____.

a) an S-shaped curve

b) A J-shaped curve

c) a horizontal line

d) A diagonal line from top left to bottom right

e) a diagonal line from bottom left to top right

13. A sustainable society _____.

a) returns to a more primitive style of living

b) meets the needs and aspirations of the present without compromising those of the future

c) curtails all further development

d) continues as always and assumes that things will work out for the best

e) is consistent with the goals of environmentalism

14. Which of the following is not a characteristic of a sustainable society ?

- a) Relies heavily on fossil fuels**
- b) Recycles whenever possible
- c) Practices resource conservation
- d) Uses renewable resources

15. A sustainable system or process is one that _____.

- a) can be continued indefinitely without depleting the material or energy resources required to keep it running**
- b) persists over time
- c) is carefully managed using sound ecological principles
- d) is operating at its carrying capacity
- e) will support as much harvesting as humans wish to undertake

16. Rain water harvesting is not _____.

- a) catching and holding rain where it falls and using it
- b) storing it in tanks
- c) recharging groundwater
- d) harvesting the crops**

17. Which state has made it compulsory to harvest rain water for all building ?

- a) Rajasthan
- b) West Bengal
- c) Tamil Nadu**
- d) Maharashtra

18. In Mumbai, what is the minimum plot area for which rain water harvesting is mandatory ?

- a) 2000 sq.m
- b) 1000 sq.m**
- c) 500 sq.m
- d) 1500 sq.m

19. The environmental cause of increase in skin cancer, cataract and mutation is _____.

- a) acid rain
- b) global warming
- c) nuclear winter
- d) ozone depletion**

20. Greenhouse effect leading to the warming up of the atmosphere due to _____.

- a) infrared rays reaching the Earth
- b) UV rays reaching the Earth
- c) increase in temperature due to increase in CO₂ level**
- d) depletion of ozone layer

21. Acid rain _____.

- a) increases the pH of soil
- b) decreases the pH of soil**
- c) does not change the pH of soil
- d) increases the fertility of soil

22. Which one is not a greenhouse gas ?

- a) CO₂
- b) Ozone**
- c) CH₄
- d) CFC

23. Our environment is presently not degrading due to _____.

- a) deforestation
- b) overgrazing
- c) rapid industrialization
- d) urbanization
- e) none of the above**

24. Which one of the following is NOT included in Earth's climate system ?

- a) Atmosphere
- b) Solid Earth
- c) Biosphere
- d) Hydrosphere
- e) Solar sphere**

25. Which one of the following is NOT a significant natural cause of climate change ?

- a) Solar variability
- b) Variations in Earth's orbit
- c) Volcanic activity
- d) Plate tectonics
- e) Erosion of the land**

26. The contribution of coal and oil is a major source of which greenhouse gas ?

- a) Ozone
- b) Nitrous oxide
- c) Methane
- d) CFC's
- e) None of these**

27. Which of the following is associated with the astronomical theory of climate change ?

- a) Eccentricity of Earth's axis
- b) Obliquity of Earth's axis
- c) Precession of Earth's axis
- d) All of the above**
- e) Both precession and obliquity of Earth

28. Which one of the following is a significant contributor to increased levels of atmospheric carbon dioxide ?

- a) Deforestation**
- b) Aerosol spray can gases
- c) Refrigerant leakage
- d) Large rice paddies
- e) None of the above

29. The slow wobbling of Earth as it spins on its axis is called _____.

- a) eccentricity
- b) obliquity
- c) aphelion
- d) precession**
- e) extension

30. Which of the following is a possible consequence of a greenhouse warming ?

- a) a change in agricultural productivity
- b) a rise in sea level
- c) new weather patterns
- d) alteration of the world's water resources
- e) all of the above**

31. Oxygen isotope analysis measures the _____.

- a) amount of radioactive oxygen in the air
- b) oxygen content of ocean water
- c) ratio of two different types of oxygen atoms**
- d) oxygen content of organic sediment
- e) rate of oxygen depletion

32. Which one of the following is NOT a greenhouse gas ?

- a) Nitrous oxide
- b) Methane
- c) Carbon dioxide
- d) Oxygen**
- e) All are greenhouse gases

33. When determining climate change, oxygen isotope measurements are made from an analysis of _____.

- a) ocean water
- b) lava
- c) cores from old trees
- d) glacial ice**
- e) none of the above

34. Along with carbon dioxide _____ is largely responsible for the greenhouse effect of the atmosphere.

- a) Nitrogen
- b) Sulphur dioxide
- c) Hydrogen
- d) Oxygen
- e) Water vapour**

35. Which of the following help scientists discover how climate has changed over broad expanses of time ?

- a) Sea-floor sediments
- b) Oxygen isotope analysis
- c) Paleosols
- d) All of the above**
- e) Only sea-floor sediments and oxygen isotope analysis

36. The greenhouse effect is caused by _____.

- a) Greenhouse gases in the lower atmosphere absorbing solar radiation
- b) Greenhouse gases in the lower atmosphere absorbing radiation from the Earth's surface and preventing much of it escaping into space**
- c) Too much heat in the atmosphere
- d) Too much sunshine reaching Earth

37. Which of these natural events affect the climate ?

- a) Thawing permafrost
- b) The path of the Earth around the sun
- c) Volcanic eruptions
- d) All of the above**

38. Which of these greenhouse gases is most abundant in the atmosphere ?

- a) Carbon dioxide
- b) Methane
- c) Nitrous oxide
- d) Water vapour**

39. What greenhouse gas was not present in the atmosphere in pre-industrial times (before 1750) ?

- a) Trichlorofluoromethane**
- b) Carbon dioxide
- c) Nitrous oxide
- d) Methane

40. Which of these countries has the highest per capita carbon dioxide emissions ?

- a) United States
- b) Australia
- c) Saudi Arabia**
- d) China

41. Which of the following activities contributes the most to carbon emissions globally ?

- a) Agriculture
- b) Transport
- c) Forestry
- d) Energy supply**

42. The 1987 Montreal Protocol was signed for which of the following reasons ?

- a) **To phase out the use of CFC's, found to be causing depletion of the ozone layer**
- b) To begin converting from fossil fuel used to clean renewable energy sources to reduce the anthropogenic greenhouse effect
- c) To stop the global trade in products made from endangered tigers
- d) To ban nuclear testing in tropical oceans

43. One effect of global warming is a rise in sea levels which certainly could affect coastal cities that are little above current sea level. How much has the sea level risen in the past 100 years ?

- a) 1-2 inches
- b) 6-8 feet
- c) **6-8 inches**
- d) 1-2 feet

44. What would Kyoto Protocol do ?

- a) It would not allow developing countries like China to modify their coal-burning equipment to prevent further increase in carbon dioxide levels.
- b) It would curb all CO₂ emissions from all countries to bring them down about 15 to 20% from the levels reached in the 1990s
- c) It would completely ban production of CFC's
- d) **By 2012, it would curb CO₂ emissions from all developed countries to bring them about 6 to 8% down from the levels reached in 1990**

45. What part of the world is expected to warm up the most under most common scenarios of global warming for the 21st century ?

- a) **The Arctic**
- b) Southern Europe and North Africa
- c) Southwestern USA and parts of China
- d) Tropical regions

46. Which statement below is correct ?

- a) Normal rain's pH varies by more than 3 pH units
- b) Normal rain has a perfectly neutral reaction (pH = 7)
- c) **Normal rain is mildly acidic because of the carbonic acid (pH < 7)**
- d) It is impossible to tell
- e) Normal rain is mildly alkaline (pH > 7)

47. Which statement best describes the current situation with the ozone hole ?

- a) The ozone hole has grown about 50% larger
- b) The ozone hole has shown a major decline after the ozone-depleting chemicals were banned under the Montreal Protocol**
- c) The ozone hole remained more or less constant in size since 2000, despite a slight reduction in the amount of CFCs in the stratosphere
- d) Ozone holes of about equal size are now developing in both the Arctic and Antarctica

48. Which strategy below will not assist us in preventing acid rain ?

- a) Installing scrubbers at power plants
- b) Switching to wind power as a source of electricity
- c) Using used rubber tires on children's playgrounds**
- d) Switching to low sulphur coal

49. The pH scale is logarithmic; that is, each unit on it is 10 times greater than the previous one.

- a) True**
- b) False

50. Most of the problems with acid deposition in this country result from rain. The amount of acid contained in snow is minimal. True or false ?

- a) True
- b) False**

51. Even with a complete CFC ban worldwide, it will take the ozone layer 50 to 100 years to recover.

- a) True**
- b) False

52. Ozone is a pollutant at ground level, but it is a desirable chemical in the stratosphere because it blocks dangerous ultraviolet radiation.

- a) True**
- b) False

53. An ozone hole can occur only over Antarctica.

- a) True
- b) False**

54. After recent studies done by the International Panel on Climate Change researchers, it is certain that the planet is indeed warming.

- a) True**
- b) False

55. The projected effects of global warming are all negative.

- a) True
- b) False**

56. Global warming over the 21st century will likely result in a 10 meter rise in ocean levels.

- a) True
- b) False**

57. Because warming is global, Earth is warming up uniformly everywhere.

- a) True
- b) False**

58. Reductions in methane emissions could help mitigate global warming.

- a) True**
- b) False

59. All global circulation models predict a future that is warmer than today for the next 50-100 years.

- a) True**
- b) False

60. In the past century, the amount of precipitation worldwide has decreased.

- a) True
- b) False**

61. To stop global warming by the end of the 21st century, we would need to reduce greenhouse gas emissions much more than what's required under Kyoto Protocol (6 to 8%) perhaps by as much as 80% within the next 20-50 years.

- a) True**
- b) False

62. Nuclear power plants are typically fuelled with what ?

- a) Plutonium
- b) Deuterium
- c) Uranium-238
- d) Uranium-235**
- e) Tritium

63. The subatomic particles released during a nuclear chain reactor are what ?

- a) Gluons
- b) Electrons
- c) Neutrons**
- d) Muons
- e) Protons

64. An environmental problem associated with nuclear power plants is what ?

- a) Carbon dioxide emissions
- b) Nitrogen dioxide emissions
- c) Sulphur dioxide emissions
- d) Particulate emissions
- e) None of the above**

65. The current practice for disposal of high level wastes from nuclear power plants is to _____.

- a) sell the wastes to developing countries for use in their own nuclear power plants
- b) bury the wastes deep underground**
- c) allow the military to reprocess the wastes for nuclear weapons
- d) drop the wastes into the deepest parts of the ocean
- e) use the space shuttle to carry the wastes to outer space

66. Where did the worst nuclear accident in history occurred in 1986 ?

- a) Chernobyl**
- b) Yucca Mountain
- c) Chelyabinsk
- d) Brown's River Ferry
- e) Three Mile Island

67. What country has the greatest reliance on nuclear power for generation of electricity ?

- a) Japan
- b) Germany
- c) England
- d) Russia
- e) France**

68. Breeder reactors convert _____.

a) uranium-238 into plutonium-239

b) uranium-235 into plutonium-239

c) uranium-238 into uranium-235

d) uranium-235 into uranium-238

e) plutonium-239 into uranium-238

69. Since the mid 1970's, interest in nuclear energy has _____.

a) dramatically increased

b) dramatically declined

c) stayed the same

70. In nuclear fission, _____.

a) a large atom of one element is split to produce two smaller atoms of different element

b) a molecule atom of one element is split to produce two smaller molecules of different elements

c) two small atoms combine to form a larger atom of different element

71. In nuclear fusion, _____.

a) two smaller molecules are joined to produce a single larger molecule

b) a large atom of one element is split to produce two smaller atoms of different elements

c) two small atoms combine to form a larger atom of a different element

72. To make nuclear fuel, uranium ore is enriched by _____.

a) separating ^{235}U from ^{238}U to produce a material containing higher levels of ^{235}U

b) separating ^{238}U from ^{235}U to produce a material containing higher levels of ^{238}U

c) adding more ^{235}U

d) adding more ^{238}U

73. The time for half the amount of a radioactive isotope to decay is known as its _____.

a) half-life

b) radioactive decay

c) halving time

d) rate of decay

74. What containment period does EPA recommend for long-term storage of radioactive wastes ?

- a) 10,000 years**
- b) 100,000 years
- c) 1000 years
- d) 100 years

75. Which of the following is not a basis for opposition to nuclear power ?

- a) High construction costs
- b) Generation of greenhouse gases**
- c) The risk of serious accident
- d) Security risks

76. Uranium-238 is the fissionable isotope of uranium commonly used in nuclear power plants.

- a) True
- b) False**

77. One benefit of nuclear energy is that uranium ore requires little processing before use as a fuel in a nuclear power plant.

- a) True
- b) False**

78. The energy released from a fission chain reaction is directly converted into electricity.

- a) True
- b) False**

79. The radiation exposure from living near a nuclear power plant is approximately equal to that of a single chest X ray.

- a) True**
- b) False

80. Long-term storage of wastes from nuclear power plants is not a problem because radioactive decay has caused the waste products to become stable and no longer radioactive.

- a) True
- b) False**

81. Controlled fusion reactions should be possible in theory, but have yet to be achieved in reality.

- a) True**
- b) False

82. Coal-fired generating plants produce far more solid waste than nuclear plants.

a) True

b) False

83. Closing down (decommissioning) a nuclear power plant can cost more than building the plant in the first place.

a) True

b) False

84. Carbon credit is meant for _____.

a) Deforestation

b) Protection of environment

c) Rural infrastructure

d) Diamond trading

85. Mechanism that does NOT enable developed countries with quantified emission limitation and reduction commitments to acquire GHG reduction credits.

a) Joint Implementation (JI)

b) Clean Development Mechanism (CDM)

c) Combined Asset Mechanism (CAM)

d) International Emission Trading (IET)

86. Concept of carbon credits came into existence in _____.

a) Montreal protocol

b) Rio conference

c) Bandung protocol

d) Kyoto protocol

87. Carbon offsets are measured in metric tons of carbon dioxide equivalent and does not represent the following greenhouse gas _____.

a) Methane (CH₄)

b) Nitrous oxide (N₂O)

c) Ozone

d) Perfluorocarbons (PFC's)

e) Hydrofluorocarbons (HFC's)

88. Which one of the following is not true about the term “Carbon Credits” ?

- a) A carbon credit gives the owner the right to emit one tonne of carbon dioxide
- b) Carbon Credits are a tradable permit scheme and can be exchanged between businesses having short of quotas or below the quotas
- c) These can be bought and sold in international/national markets at the Govt. controlled prices**
- d) The need arises because international treaties such as Kyoto Protocol set quotas on the amount of greenhouse gases that those countries can produce
- e) All the above are true

Additional Questions

1. Sustainable development is defined as meeting the needs of the present without compromising the ability of future generations to meet their own needs. This definition is given by _____.

- a) G. H. Brundtland**
- b) R. D. Tata
- c) Anil Ambani
- d) A. P. Rao

2. In 1992 Earth summit held at _____.

- a) Delhi
- b) Mumbai
- c) Rio de Janeiro**
- d) New York

3. The 3-R approach advocating minimization of resource uses are _____.

- a) Reduce, Recall, Recycle
- b) Reduce, Reuse, Recycle**
- c) Repair, Reduce, Recycle
- d) Regenerate, Recall, Reuse

4. Any system can sustain a limited number of organisms on a long term basis, which is known as its _____.

- a) Buying capacity
- b) Current capacity
- c) Carrying capacity**
- d) Cash capacity

5. Carrying capacity has two basic components. One is supporting capacity and other is _____.

- a) Non-supporting capacity
- b) Special capacity
- c) Assimilative capacity**
- d) Cash capacity

6. The National council of Environmental planning and coordination was set up in _____.

- a) 1952
- b) 1953
- c) 1972**
- d) 1974

7. The annual average rainfall in India is _____.

- a) 1200 mm
- b) 1600 mm**
- c) 2100 mm
- d) 4100 mm

8. _____ has been doing a good job for harvesting rain water by building check dam in Rajasthan.

- a) Rajendra Singh**
- b) Ashok Singh
- c) S. Naidu
- d) A. P. Prasad

9. Mr. _____ from Rajasthan has been awarded by Magsaysay Award for his contribution in Rain water harvesting.

- a) Ashok Prasad
- b) Rajendra Singh**
- c) S. P. Sandhu
- d) A. P. Kadam

10. Sardar sarovar project of dams is on _____.

- a) Ganga river
- b) Narmada river**
- c) Kali river
- d) Yamuna river

11. IPCC stands for _____.

a) Intergovernmental Panel on climate change

b) International panel on climate change

c) Intergovernmental policies of climate change

d) International policies of climate protection

12. The lower most layer of the atmosphere is called as _____.

a) Troposphere

b) Nano-sphere

c) Ozone-sphere

d) Nitro-sphere

13. Chlorofluorocarbons denoted by _____.

a) CFCs

b) CLCs

c) CFLs

d) CFFCs

14. Rain water is converted into acidic rain when its pH falls below _____.

a) 1.6

b) 2.6

c) 3.6

d) 5.6

15. Clean or natural rain water has a pH of _____ at 20°C.

a) 1.6

b) 2.6

c) 3.6

d) 5.6

16. The _____ lake located in the state of New York are known to receive acid rain.

a) Adirondack

b) Dal

c) Riskon

d) Aspiron

17. Generally sulphuric acid forms a major fraction of _____.

a) Global warming

b) Acid rain

c) Flood

d) Wind development

18. In India at this place acid rain is recorded.

a) Kodaikanal

b) Delhi

c) Mumbai

d) Yavatmal

19. The natural sunscreen in the stratosphere is called as _____.

a) Oxygen layer

b) Hydrogen layer

c) Ozone layer

d) Sulphur layer

20. Ozone is form of _____.

a) Oxygen

b) Hydrogen

c) Cl

d) Pl

21. The molecule of oxygen contains two atoms whereas that of ozone contains _____.

a) one

b) three

c) four

d) none of these

22. In the stratosphere ozone is continuously being created by the absorption of short wavelength _____ radiations.

a) Ultraviolet

b) Superultra

c) Nevialtra

d) Blue rays

23. The amount of atmospheric ozone is measured by _____.

a) Wilson spectrometer

b) Rockson spectrometer

c) Ultra spectrometer

d) Dobson spectrometer

24. The amount of atmospheric ozone is expressed in _____.

- a) Pixson unit
- b) Altra unit
- c) Dobson unit**
- d) Ultra-V-Unit

25. 1 DU is equivalent to a _____ mm thickness of pure ozone.

- a) 0.001
- b) 1
- c) 0.01**
- d) 100

26. The Antarctica ozone hole was discovered by _____.

- a) Dr. A. S. Bose
- b) Dr. Joe C. Farman**
- c) Dr. A. L. Kaise
- d) Dr. P. R. Narayan

27. For the ozone depletion in the stratosphere _____ are mainly responsible.

- a) O₂
- b) CO₂
- c) Acid rain
- d) CFCs**

28. CFCs are a group of synthetic chemical and it is first discovered by _____.

- a) Thomas Midgley**
- b) N. K. Bose
- c) P. W. Wrinker
- d) N. S. Rao

29. _____ are used as coolants in refrigerator and air condition.

- a) CFCs**
- b) O₃
- c) O₂ + O₃
- d) CFCFCs

30. Due to nuclear explosion, a phenomenon opposite to Global warming occur, is called as _____.

- a) Nuclear summer
- b) Nuclear rain
- c) Nuclear winter**
- d) Acid winter

31. The Chernobyl nuclear accidents has resulted in widespread contamination by _____.

- a) radioactive**
- b) acid molecule
- c) wind effect
- d) deforestation

32. In the nuclear holocaust in Japan 1945, two nuclear bombs were dropped on Hiroshima and _____.

- a) Wagasaki
- b) Nagasaki**
- c) Ragasaki
- d) Tokyo

33. The large scale destruction of human lives by fire :

- a) fire killing
- b) holocaust**
- c) monocide
- d) homicide

34. _____ is the first country in the world to have made provisions for protection and conservation of environment in its constitution.

- a) India**
- b) Japan
- c) U.S.
- d) New Zealand

35. 5th June is celebrated as _____.

- a) World Forest Day
- b) World Environment Day**
- c) World Water Day
- d) Earth Day

36. The article _____ in the constitution recognises environmental protection as one of the fundamental duties of every citizen of India.

- a) Article 42
- b) Article 48A
- c) Article 51A(g)**
- d) Article 57A(g)

37. The air (prevention and control of pollution) Act was enforced in _____.

- a) 1987
- b) 1961
- c) 1971
- d) 1981**

38. Noise pollution has been inserted in the Air (prevention and control of pollution) Act in _____.

- a) 1987**
- b) 1977
- c) 1967
- d) 1957

39. In the Air (prevention and control of pollution) Act 1981, section 20 of the act is for _____.

- a) Provision for ensuring emission standards from automobile**
- b) Provision for ensuring air pollution control area
- c) Provision for ensuring industrial emissions
- d) none of these

40. As per section 19 of the Air (prevention and control of pollution) Act, the state government may declare _____.

- a) Air pollution control area**
- b) Stake height for emissions
- c) emissions from vehicles
- d) none of these

41. CPCB stands for _____.

- a) Central Pollution Control Board**
- b) Central Population Control Board
- c) Central Pollution Cences Board
- d) None of these

42. Water (prevention and control of pollution) Act, enforced in :

- a) 1964
- b) 1974**
- c) 1984
- d) 1994

43. The Environment (protection) Act came into force on _____.

- a) 1st November 1986
- b) 19th November 1986**
- c) 20th November 1999
- d) 19th November 1996

44. The Environment (protection) Act, 1986 on November 19. The November 19 is birth anniversary of our late Prime Minister :

- a) Jawaharlal Nehru
- b) Lal Bahadur Shastri
- c) Indira Gandhi**
- d) Morarji Desai

45. Wildlife (protection) act came into force in the year _____.

- a) 1972**
- b) 1982
- c) 1992
- d) 1902

46. In 1800, the population on Earth was about _____.

- a) 4 billion
- b) 3 billion
- c) 45 billion
- d) 1 billion**

47. The present world population has just crossed _____.

- a) 6 billion**
- b) 11 billion
- c) 14 billion
- d) 89 billion

48. The time needed for a population to double its size at a constant annual rate is known as _____.

- a) Population time
- b) Reverse population time
- c) Doubling time**
- d) Reciprocating time

49. If r is the annual growth rate, then doubling time (TD) = _____

- a) $r/70$
- b) $70/r$**
- c) $(r+r)/70$
- d) $(r^2)/70$

50. If a nation has 2% annual growth rate, its population will double in _____.

- a) 25 years
- b) 15 years
- c) 100 years
- d) 35 years**

51. Bell shaped pyramid structure of population occurs in _____.

- a) India
- b) France**
- c) Nigeria
- d) Ethiopia

52. Pyramid shaped structure of population occurs in _____.

- a) India**
- b) USA
- c) France
- d) Canada

53. Urn-shaped structure of population growth occurs in _____.

- a) Germany**
- b) India
- c) Ethiopia
- d) Nigeria

54. United Nations decade for women had been during _____.

- a) 1985-1995
- b) 1975-1985**
- c) 1915-1925
- d) 1970-1980

55. HIV stands for _____.

- a) Human Immunodeficiency Virus**
- b) Health Immunodeficiency Virus
- c) Human Identification Virus
- d) None of these

56. AIDS stands for _____.

- a) Acquired Immuno Deficiency Syndrome**
- b) Applied Immuno Deficiency Syndrome
- c) Acquired Immuno Deficiency System
- d) None of these

57. In AIDS there is a decline in _____ which are the key fighters in the immune system.

- a) S-cells
- b) P-cells
- c) T-cells**
- d) Y-cells

58. _____ has the lowest birth rates among all the states in India.

- a) Punjab
- b) Maharashtra
- c) UP
- d) Kerala**

59. The _____ Amendment of India constitution is for environmental protection.

- a) 40
- b) 30
- c) 42**
- d) 52

60. In 42nd Amendment for environmental protection Article no. is _____.

- a) 40-A
- b) 48-A**
- c) 50-A
- d) 59-C

61. CPCB stands for _____.

- a) Central Pollution Control Board**
- b) Central Pollution Control Body
- c) Central Pollution Control Board
- d) Central Prevention Control Board

62. SPCB stands for _____.

- a) State Pollution Control Board**
- b) Special Pollution Control Board
- c) State Pollution Control Body
- d) None of these

63. NGO stands for _____.

- a) Non-Governmental organisation**
- b) Non-Governmental Office
- c) Non-Group Organisation
- d) None of these

64. WWF (a international environmental organization) stands for _____.

- a) Worldwide Funds for Nature**
- b) Worldwide Focus for Nature
- c) Worldwide Funds for Nation
- d) None of these

65. _____ is an environment friendly international organization, which aims in promoting environmental awareness.

- a) Greenspace**
- b) India Ink
- c) Inio-ok
- d) Grassland

66. In order to stop commercial whaling, _____ is working on many fronts.

- a) India Ink
- b) Green peace**
- c) Red peace
- d) Road map

67. The co-ordinating body of WWF International is located at gland in _____.

- a) India
- b) America
- c) Canada
- d) Switzerland**

68. The promotion of nature conservation and environmental protection as the basis for sustainable and equitable development is the mission of _____.

- a) WWF-India**
- b) Greenpeace
- c) Red India
- d) Blue India

69. BNHS stands for _____.

- a) Bombay Natural History Society**
- b) Bombay Nature History System
- c) Big Natural History Society
- d) British Natural History Society

70. Bombay Natural History society was founded in _____.

- a) 1983
- b) 1883**
- c) 1183
- d) 1919

71. Development alternative group based in _____ works in all parts of the country.

- a) Delhi**
- b) Mumbai
- c) Nagpur
- d) Kanpur

72. Development alternative group was established in

- a) 1980
- b) 1990
- c) 1983**
- d) 1812

73. The energy research institute (TERI) established the TERI university in _____.

- a) 1998**
- b) 1898
- c) 1990
- d) 1298

74. The concept of sustainable development is often broken out into three constituent parts, environmental sustainability, economical sustainability and _____ sustainability.

- a) Physical
- b) Social**
- c) Non-physical
- d) Chemical

75. CRZ stands for _____.

- a) Coastal Regulation Zone**
- b) Coraal Regulation Zone
- c) Coastal Rapid Zone
- d) Coastal Reputed Zone

76. If mining lease area is greater than 50 ha, the project falls in ____ category.

- a) A**
- b) B
- c) C
- d) D

77. If mining lease area is less than 50 ha, then project falls in ____ category.

- a) A
- b) B**
- c) C
- d) D

78. Nuclear power projects and processing of nuclear fuel all fall in category irrespective of size and extent.

- a) A**
- b) B
- c) C
- d) D

79. There are ____ types of CRZ.

- a) one
- b) two
- c) three
- d) four**

80. Mangroves, sand dunes, mud flats, come in _____

- a) CRZ-I**
- b) CRZ-II
- c) CRZ-III
- d) CRZ-IV

81. The forest (conservation) act came into force with effect from October 25, _____.

- a) 1960
- b) 1970
- c) 1980**
- d) 1990

82. GEAC stands for _____.

- a) Genetic Engineering Approval Committee**
- b) General Engineering Approval Committee
- c) General Engineering Approval Company
- d) None of these

83. The purpose of the Clean Development Mechanism (CDM) is defined in Article 12 of the _____ protocol to the United Nations Framework convention on climate change.

- a) Kyoto**
- b) Canada
- c) Mumbai
- d) Tokyo

84. Scientists like _____ and environmentalists who led philosophers to consider the philosophical aspect of environmental problems.

- a) Rachel Carson**
- b) Newton
- c) Homi Bhaba
- d) Carls Luis

85. Conscious collection and storage of rainwater to cater to demands of water, for drinking, domestic purpose or irrigation is termed as _____.

- a) Rainwater harvesting**
- b) Water solution
- c) Water protection
- d) Water pollution

86. The state government of Maharashtra has made rainwater harvesting mandatory for all the buildings that are being constructed on plots than are more than _____ sq. m. in size.

- a) 500
- b) 1000**
- c) 2000
- d) 4000

87. _____ are the microscopic pores on the underside of the leaf.

a) Stomata

b) Billurbin

c) Green-dots

d) Green pores

88. _____ allow the plant leaves take in carbon dioxide and lets out oxygen.

a) Green dots

b) Stomata

c) Green buds

d) Billurbin

89. Renewable energy provides _____ % of electricity generation worldwide.

a) 10

b) 28

c) 19

d) 81

90. Renewable sources used for power generation are only about _____ % in India.

a) 1

b) 91

c) 12

d) 81

91. _____ is one of the options thought by many minds for producing bio-fuels.

a) Jatropha

b) Bajari

c) Rice

d) Wheat

92. NWDA stands for _____.

a) National Water Development Agency

b) Natural Water Development Agency

c) National Work Development Agency

d) National Work Department Agency

93. The average rainfall in India is about _____ billion cubic meters.

a) 1000

b) 2000

c) 3000

d) 4000

94. Interlinking of river project has been split in _____ parts.

- a) one
- b) two**
- c) three
- d) four

95. Environmental Information System (ENVIS) has its headquarters in _____.

- a) Mumbai
- b) Delhi**
- c) Nagpur
- d) Indore

96. GIS stands for _____.

- a) Geographical Information System**
- b) General Information System
- c) General Impact System
- d) General information School

97. Solar _____ technique is used to convert salt water to fresh water.

- a) desalination**
- b) salination
- c) power
- d) de-odour

98. Green architecture is also known as _____ architecture.

- a) sustainable**
- b) global
- c) natural
- d) ECO

99. This is one of the principle of green architecture.

- a) Good agriculture
- b) Global warming
- c) Indoor air quality**
- d) Cattle conservation

100. Solar panels are photo _____ panels that generate electricity from sunlight.

- a) electrical
- b) electronic
- c) plastic
- d) voltanic**

101. Vertical farming is also known as _____.

- a) great farming
- b) global farming
- c) indoor farming**
- d) E-farming

102. _____ technique used in vertical farming.

- a) Hydroponics**
- b) E-watering
- c) Delta method
- d) Beta method

103. Nutrient Film Technique (NFT) is used in _____ farming.

- a) E
- b) Global
- c) Composting
- d) Vertical**

104. NFT and E88 and flow methods are used for _____ farming.

- a) Global
- b) Composting
- c) Vertical**
- d) Hill and Chief

105. _____ is the technique in which plants grow in the air, with their roots suspended in a nutrient rich moist solution.

- a) Aeroponics**
- b) E-solution
- c) air
- d) Solar water

106. BEV and PHEV are the types of _____.

- a) Vertical farming
- b) Horizontal farming
- c) Watering to plants
- d) Electric vehicles**

107. Plant based packaging is also known as _____ packing.

- a) Chemical
- b) Non-chemical
- c) bio**
- d) global
